

iReach Multibus™ Sustainability in Ireland 2008

The **iReach Multibus™** offering is a unique multimodal omnibus survey looking at key Industry or topic areas across 1000 Consumers and 250 Business Decision makers in Ireland.

In June 2008 iReach launched a new and unique Omnibus dedicated to Sustainability in Ireland to run every 3 months and structured to study and analyse a wide range of related and essential topics including **Corporate Social Responsibility**, **Energy Trends**, **Environmental** and **Technology** issues across Irish consumers and business executives.

The goal is to provide a regular research platform for participants to gauge the market understanding of a series of issues, for example; awareness of sustainability targets, consumer and business grants, renewable energy options, waste recycling options, impact of individual and business choices on basic services such as water, electricity, technology, telecoms and fleet management.

Participants can purchase a single question or a group of questions as part of the Omnibus survey which will be executed again in October using online consumer and business panels built by iReach on a nationally representative basis. with final findings delivered in tabular or report form by month end.

Regular Omnibus surveys require each participant to accept the lowest common dominator across the entire survey, so the insights you get are not an exact match to your requirements. With **iReach Multibus™** we focus on shared topic or industry issues across consumer and business groups. We can also extend the survey sample for each participant to obtain the unique insights required to answer more targeted or specific questions.

A range of different clients can simultaneously access each **iReach Multibus™** survey, either as a one-off exercise, or as part of an on-going tracking research programme, obtaining the cost benefits of a multi-client Omnibus with the unique insights of a custom research program. Price information is enclosed and customer quotes available.
